general information

general information

CARE & MAINTENANCE 61

care & maintenance

Cork

Cork should be regularly cleaned with a soft cloth or duster. Stains should be tackled immediately with warm, soapy water, working from circumference to centre and rubbing gently. Repeat as necessary.

All cork items and especially dark finishes, are sensitive to UV and will fade if left exposed to sunlight, turn regularly to avoid bleach lines.

Felt

PET felt requires regular vacuuming with a soft nozzle attachment. Treat all spills and stains immediately, wiping up and blotting liquids with a lint free cloth. Most marks or stains may be removed with copious amounts of warm water but great care should be taken not to rub or bald spots may occur. Instead, use a dabbing action and plenty of water, flushing water through the felt and capturing it in a vessel below.

If stains persist we recommend carefully following the instructions for the James cleaning set which are dependent on the type of stain – see <https://www.james.eu/en>

Powder Coat

Powder coated surfaces should be regularly dusted with a soft, lint free cloth and may be cleaned with a damp cloth. For more thorough cleaning, use a wet cloth and mild washing up liquid. After cleaning, wipe the surface with clear water to avoid streaking and wipe dry with a soft, lint free cloth. Take particular care with textured coatings to use a lint free cloth.

Powder coated finishes used outdoors will gradually fade when exposed to UV light.

Anodised Aluminium

Anodised aluminium requires regular cleaning to prevent the build-up of dirt and may be cleaned with warm water on a damp, lint free cloth. More difficult marks may require the use of a mild abrasive such as a paste made with bicarbonate of soda powder and water. Great care must be taken when using abrasive cleaning products and a very gentle approach is required so as not to damage the surface. Once clean, rinse the surface with clean water and dry with a lint free cloth.

Polished Aluminium

To remove fingerprints and dust, clean the surface with a soft cloth. For more thorough cleaning use warm water with a mild detergent, followed by a clean water rinse. Wipe the surface completely dry after cleaning to avoid streaks.

Solid Wood

All solid wooden surfaces are treated with a clear lacquer finish and require regular dusting and cleaning with a soft, lint free cloth. All wooden finishes will scratch so care must be taken with hard or sharp objects such as keys and coins.

Solid wooden furniture must be kept within a humidity range of 40-60% and is likely to split in environments with humidity levels below 40% and split or crack if positioned close to a heat source or in temperatures above 23 degrees C. Excess humidity may cause swelling.

Spills must be treated as soon as possible. Stains should be tackled from circumference to centre using a lint free cloth and warm, soapy water. For difficult stains such as coffee or tea, use a soft bristle brush with a mild detergent, rinsing with clean water and drying with a lint free cloth.

When serving food and drink, mats and coasters should be used to avoid water marks, especially when serving hot drinks.

Avoid all furniture polishes containing silicones, abrasive cleaning agents and acids.

Long term exposure to UV light will alter the colour of solid wood in both natural and black finishes and marks may be created where uneven exposure occurs.

Lacquered Veneer & MDF

As with solid wood, veneered surfaces are treated with a clear or coloured lacquer and require regular dusting and cleaning with a soft, lint free cloth. Extreme care must be taken with hard or sharp objects to avoid scratching.

Veneer is prone to splitting in environments with humidity levels below 40% and is likely to split and crack if positioned too close to a heat source or in temperatures above 23 degrees celcius. Excess humidity may cause swelling, hence all veneered furniture should be kept at humidity levels of between 40-60%.

Spills should be treated as soon as possible and stains tackled from circumference to centre using a lint free cloth and warm, soapy water. Treat difficult stains with a soft bristle brush and a mild detergent, rinsing with clean water and drying with a lint free cloth.

Use coasters and mats whenever food or drink is served, especially if served hot. Avoid all furniture polishes containing silicones, abrasive cleaning agents and acids.

Avoid long term exposure to direct sunlight due to fading caused by UV light, darker colours especially may fade over time.

Lino

The linoleum we use for table tops requires regularly cleaning with a damp cloth. Lino should be wiped dry with a soft, lint free cloth.

Over time minor marks and blemishes may appear, M2 Care Desktop Maintainer may be used periodically to restore the surface appearance and treat light and even medium scratches.

To prevent stains, coasters should be used for any vessel containing liquid. Remove spills as soon as possible and clean with water and a mild detergent. Do not use anything more abrasive than a white pad. Rinse clean and dry with a soft cloth to prevent streaks.

care & maintenance (continued)

HPL

High pressure laminate surfaces are extremely hard wearing but may still be scratched by hard or sharp objects. Spills should be mopped up immediately. Cleaning should be maintained regularly using a soft cloth and less frequently, a damp cloth. For more thorough cleaning use warm soapy water followed by a clean water rinse and dry with a soft cloth to avoid streaks. In all instances use a lint free cloth.

Fabrics

For best results, upholstery should be regularly vacuumed to remove dust and fluff. Spills must be tackled immediately using an absorbent cloth, blotting to remove as much liquid as possible.

Remove marks and stains with a sponge or absorbent cloth. Start on the outside and work inwards. On no account must upholstery be rubbed. Difficult stains may be removed with stain remover, we recommend James cleaning set – see <https://www.james.eu/en> but all cleaning agents should be tested on a piece of fabric in an unobtrusive area and the advice of the cleaning product manufacturer must be followed.

Please seek advice from a professional stain removal service if stains persist. All fabrics have individual cleaning instructions which should be requested from the fabric manufacturer before cleaning takes place. All fabrics will fade if left in direct light.

Leather

To avoid drying and cracking, leather furniture should not be placed in direct sunlight and should be at least 30 cm from sources of heat. To ensure that leather stays soft, supple and retains its natural, protective coating, we recommend treating twice a year with a protective agent.

Superficial dirt may be removed with a damp cloth. Be careful not to wet the leather or apply too much pressure, rubbing should be avoided. Small marks or ink stains may be removed by using a white eraser.

It is very important not to use aggressive products like stain remover, turpentine, shoe polish, etc. all cleaning agents should first be tested on an unobtrusive area.

Please refer to the leather manufacturers' individual cleaning recommendations and take special care with aniline leathers. All leathers will fade if left in direct light.
