adare

Tailoring meets engineering, innovated through second-life materials. Designed by Pearson Lloyd for Teknion, Aarea is familiar and welcoming, intuitive and ergonomic in use, and made with a minimum of components and materials, which speaks to the ingenuity and intelligence of the chair's design. Adapting to modern workstyles and the shift to more open and collaborative office environments, Aarea meets the needs of today's workforce.

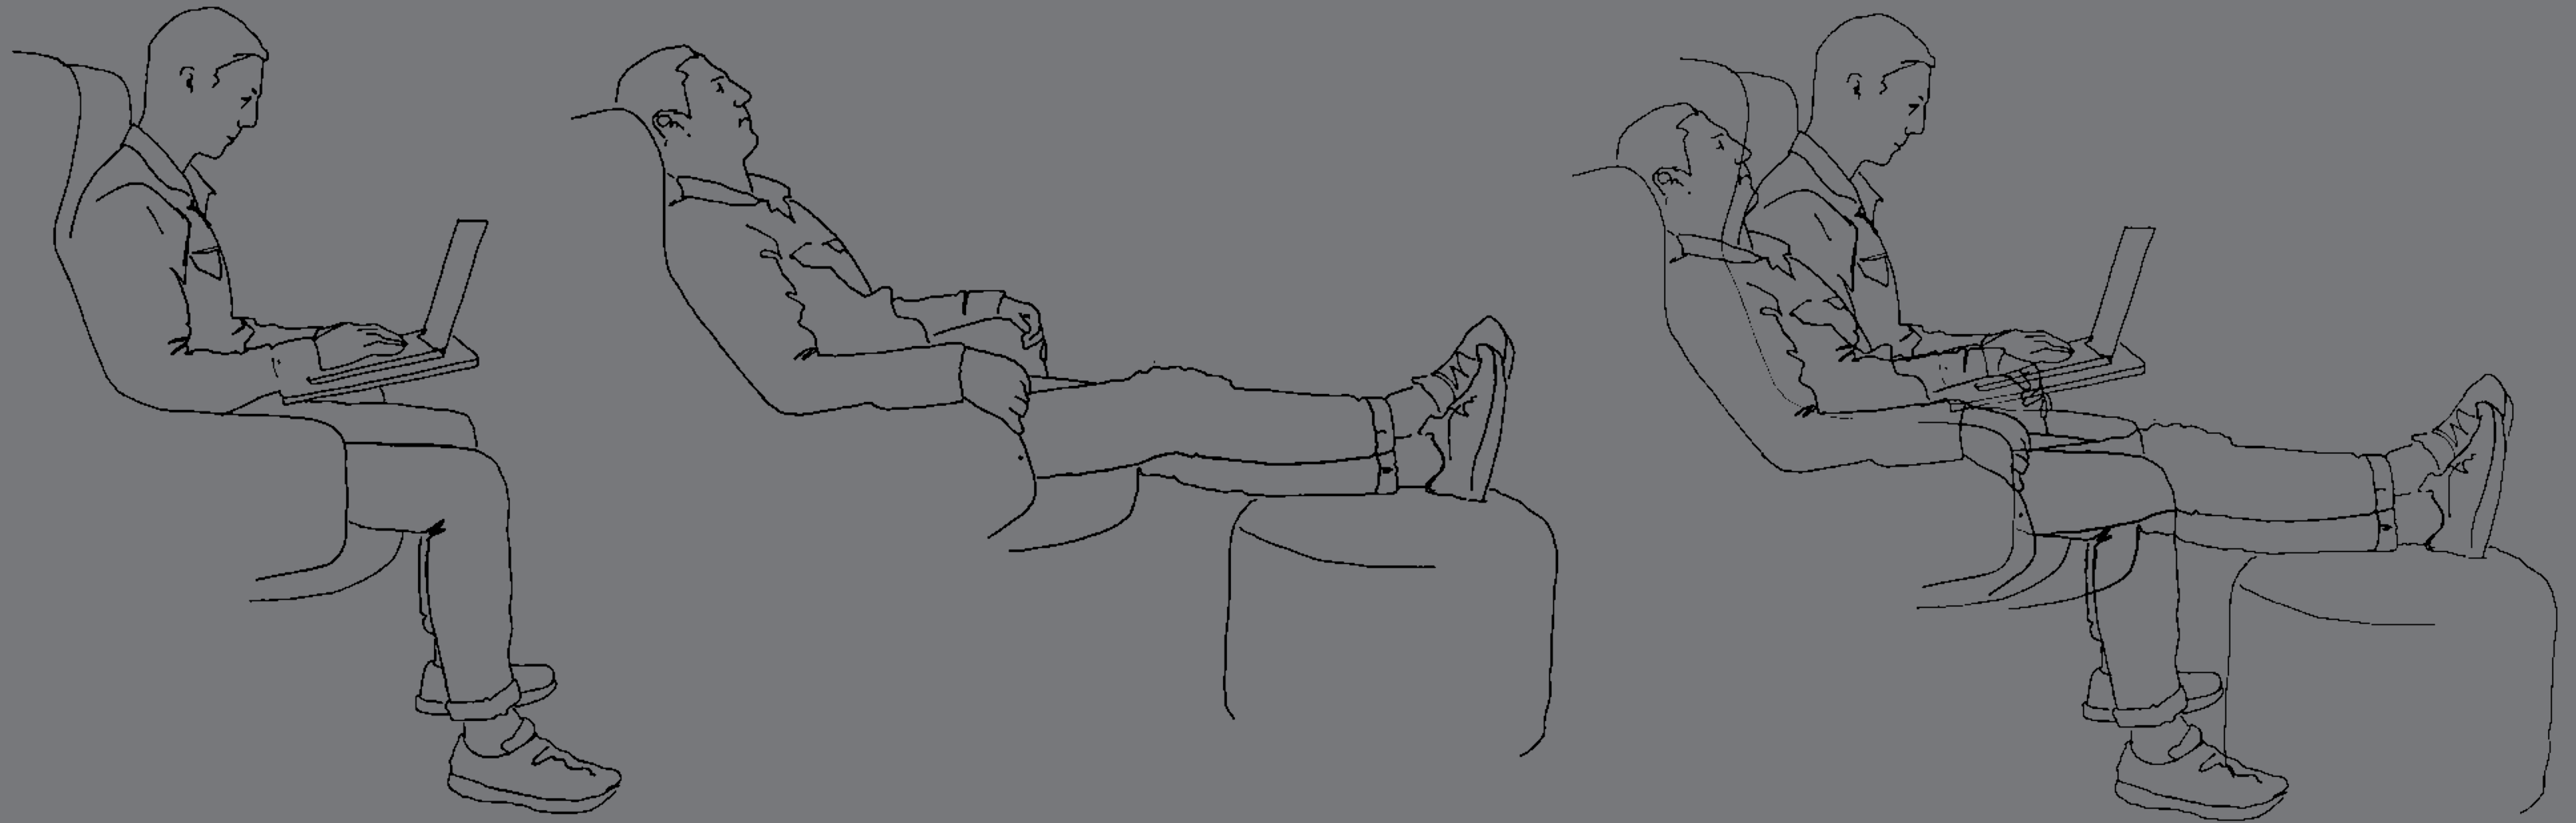

Insight Driven Design Available in three styles – conference, casual lounge, and worklounge – Aarea has solutions for the modern workplace. The conference chair promotes changing postures from upright to relaxed for social and formal settings, in a lightweight, highly comfortable solution. The casual lounge chair fits in any open setting for a supportive, cushioned sit with height adjustability and four-star, wood and metal leg options. The worklounge offers high performance without bulky, visibly mechanical components – essentially a lounge chair that acts like a task chair. The synchro-tilt mechanism allows the seat back and cushion to recline at different rates, keeping your feet on the floor – a feature previously unique to task chairs.

Designed for Sustainability Thoughtful and conservative use of materials was paramount in the development of Aarea. Made of only five components – a tubular steel frame, a 3D textile knit, an upholstered seat cushion, plastic arm pads, and a recycled aluminum base – Aarea is easy to disassemble and has high recyclability at the end of the chair's lifecycle. The bespoke 3D knit is fabricated from retrieved marine plastic, minimizing the use of virgin materials and waste while maintaining a supportive and breathable structure.

It's a lounge chair that acts like a task chair.

The Area Worklounge is designed with a synchro-tilt mechanism that provides support for a range of relaxed and active postures. The free-flow mode and three lockable tilt positions (upright, mid-recline and full recline) can be adjusted for varying modes of work and respite.

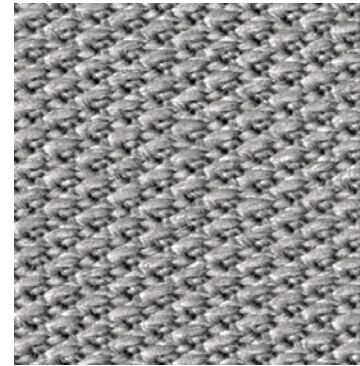

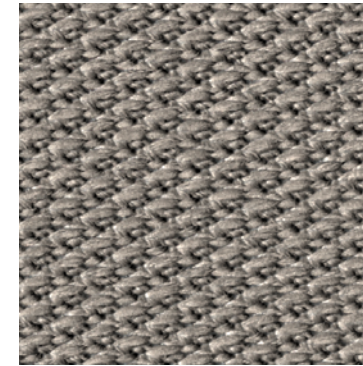

Area's knit back is flexible and readily conforms to the shape of the body, creating seamless support through the tensions inherent in the knit. The mélange knit is fabricated from retrieved marine plastic to minimize virgin materials and waste. The knit back is made to size, creating no additional cut-off waste.
